

Get Discovered → Convert Direct → Bring Them Back.

TableChat is an AI-powered restaurant discovery and growth platform that helps independent restaurants get discovered, convert diners into direct customers and bring them back.

TRADITIONAL Restaurant → Menu → Dish	TABLECHAT Craving → Dish → Restaurant
--	---

WHAT TABLECHAT DOES

TableChat connects three parts of the restaurant customer journey: AI-powered dish-first discovery, restaurant-branded direct ordering and reservations, and customer retention through loyalty, verified reviews and automated marketing. Its marketplace is one discovery channel; restaurants subscribe to the integrated technology platform.

Diners can **Browse or Ask**: browse a menu traditionally or describe what they want conversationally and receive relevant recommendations. Recommendations can account for personal dietary restrictions. TableChat's built and functional **Taste Graph** is designed to personalize discovery from diner preferences and interactions over time.

Search understands what you ask for. The Taste Graph helps TableChat understand you.

WHAT MAKES IT DIFFERENT

Dish-first discovery. Start with what you want to eat.

Browse or Ask. Traditional menu browsing and conversational AI coexist.

Personalized recommendations. Preferences and dietary restrictions can shape results.

Restaurant-owned commerce. Connect marketplace and dish-level discovery to restaurant-branded direct ordering and reservations, then support repeat business through loyalty, verified reviews and automated marketing.

Multi-surface discovery. TableChat is building its discovery infrastructure to extend beyond the TableChat marketplace.

RESTAURANT PLATFORM

SEO-optimized branded website • direct ordering • reservations • conversational AI ordering • loyalty • verified reviews • automated marketing and social content • customer management • analytics • POS integrations • integrated delivery. Core capabilities are included without feature gating.
